

Requirements Diagram

This is a diagram showing all the required website states for Sprint 2. There must be support for logging in, certain pages with restricted access for when you are logged in, and quest marking pages. Quest pages include the map, the leaderboard, the dashboard.

Database

We're using a database in Supabase to keep track of user information. For the features in sprint 2, a table is needed for accounts (Logging in, registering), a table is needed to keep track of each user's quest progress, and a table listing all the quests.
